ORDER BY
  count DESC;
...
```

Data transformation explanation (stress → view_tklv)

- 1. **Group** the data by `subreddit` and `label` categories.
- 2. **Calculate** the `average confidence` for each group.
- 3. **Count** the number of records in each group.
- 4. **Sort** the results in descending order based on the `count` .

sample data from **view_tklv** (4 columns × 20 rows)
