GROUP BY subreddit, label  
ORDER BY subreddit, label;  
```
```

Data transformation explanation (stress → view\_newm)

- 1. **Group** the data by `subreddit` and `label` .
- 2. For each group, **calculate**:
  - `avg_confidence` : the average of `confidence` .
  - `post_count` : the number of posts.
  - `min_timestamp` : the earliest `social_timestamp` .
  - `max_timestamp` : the latest `social_timestamp` .
- 3. **Sort** the results by `subreddit` and `label` .

sample data from **view\_newm** (6 columns × 20 rows)
