To check for missing values in the dataframe, we first need to verify if there are any null values.

```
```python
import pandas as pd

Display of missing values:
display(df.isnull().sum())
```
```

| | 0 |
|--|---|
| baseline value | 0 |

dtype: int64

Given that the problem statement already informs us that there are no missing values, as indicated by the count of missing values being 0 for all columns, we can confirm this information.

The dataframe does not have any missing values. All columns have 0 missing values.
