```
```python
Import necessary libraries
import matplotlib.pyplot as plt
import seaborn as sns

Check the distribution of the 'class' column
display('Distribution of the "class" column:')
display(df['class'].value_counts())

Bar plot for the distribution of the 'class' column
plt.figure(figsize=(8,6))
sns.countplot(x='class', data=df)
plt.title('Distribution of Classes')
plt.show()

Since 'Unnamed:0' is a numerical column, let's check its distribution
display('Summary statistics for the "Unnamed:0" column:')
display(df[['Unnamed:0']].describe())

Histogram for the distribution of the 'Unnamed:0' column
plt.figure(figsize=(8,6))
sns.histplot(df['Unnamed:0'], bins=50, kde=True)
plt.title('Distribution of "Unnamed:0"')
plt.show()

Check for the length of the 'text' column
df['text_length'] = df['text'].apply(len)

Summary statistics for the 'text_length'
display('Summary statistics for the "text_length":')
display(df[['text_length']].describe())

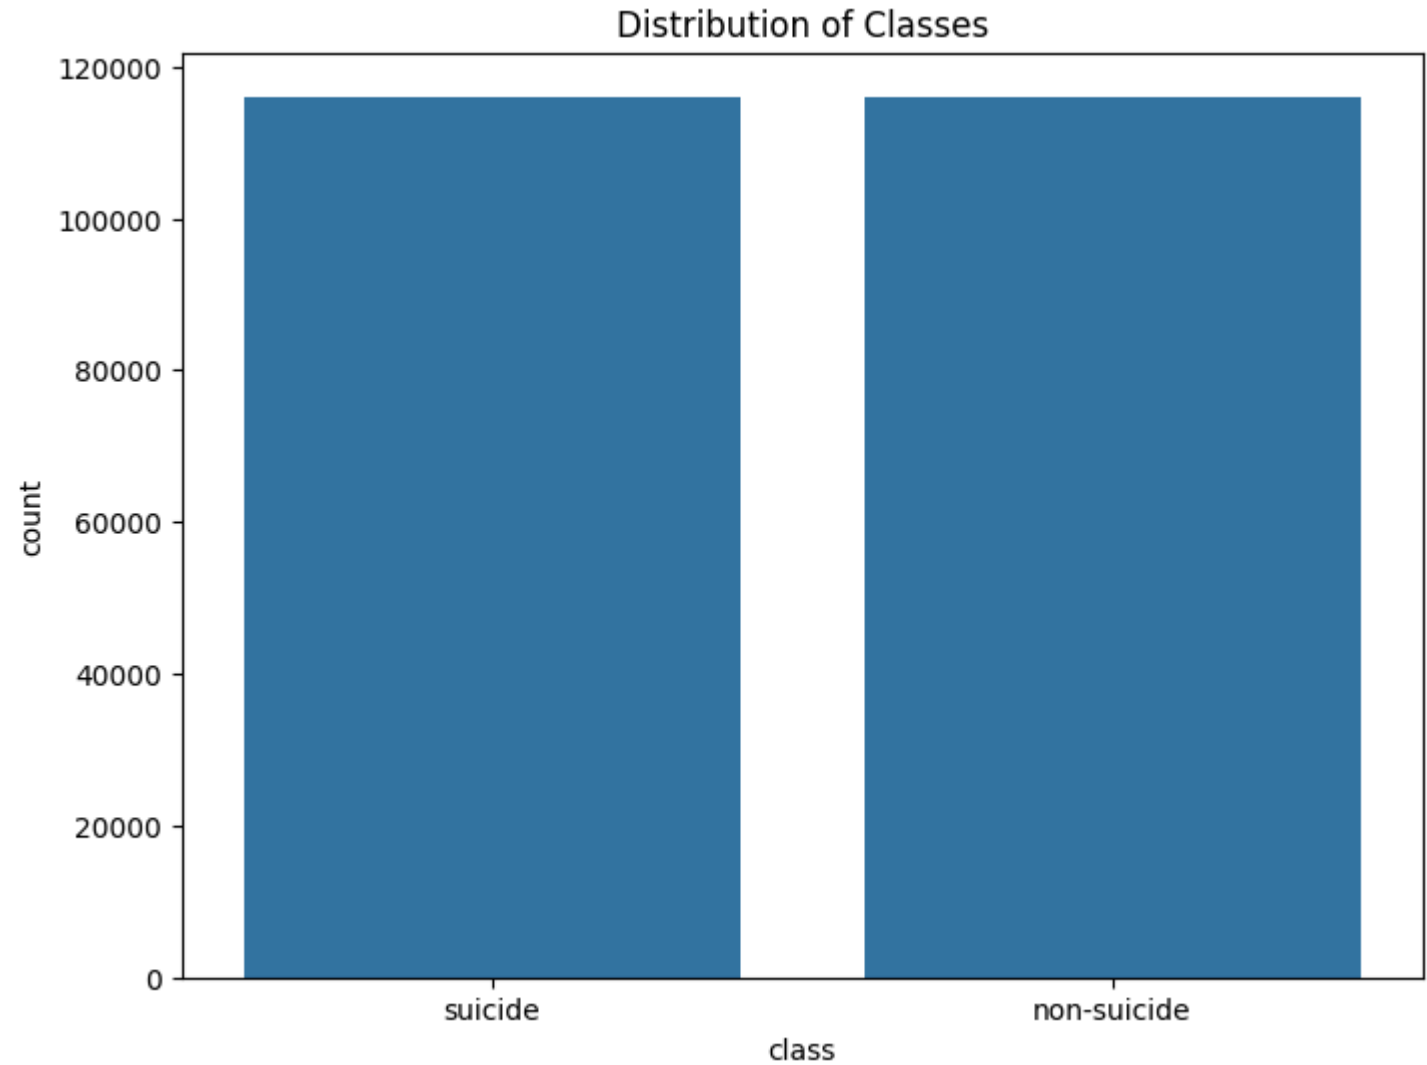

Histogram for the distribution of the 'text_length'
plt.figure(figsize=(8,6))
sns.histplot(df['text_length'], bins=50, kde=True)
plt.title('Distribution of Text Length')
plt.show()
```

'Distribution of the "class" column:'
```

| | class |
|-------------|--------|
| suicide | 116037 |
| non-suicide | 116037 |

dtype: int64

'Summary statistics for the "Unnamed:0" column:'
I tried to run the code, but got the following error: "None of [Index(['Unnamed:0'], dtype='object')] are in the [columns]"
